

## Annex 14: Relevant regulations for regulatory frameworks by case study

The following content lists the key laws within the regulatory frameworks of each case study site. The lists are not exhaustive but serve as an important reference for the body of existing legal frameworks and also provides a helpful reference for continued work within the legal requirements for disaster risk reduction and the governance of risks in these cases. Much of this information was required and gathered for the creation of the Deliverable 4.1 for European Community's 7th Framework Programme FP7/2007/2013 in the Marie Skłodowska-Curie ITN project "CHANGES" (Changing Hydro-meteorological Risks as Analyzed by a New Generation of European Scientists, Grant Agreement No. 263953). The lists are based on a variety of references. These references are listed as sources at the end of each list.
