

Contents

Chapter 1: Introduction	1
Chapter 2: Review	5
2.1 AVR research literature review	5
2.2 The objective of the research	12
Chapter 3: Mathematic models of the system components	14
3.1 System description	14
3.2 Synchronous machines	16
3.2.1 Park's model of a synchronous machine	21
3.2.2 Linear model of synchronous generator system	26
3.2.2.1 A linear equation of synchronous generator system	26
3.2.2.2 A simplified linear model of synchronous generator	31
3.2.2.3 Linearized mechanical torque and angle relation	38
3.2.2.4 Linearized torque and angle relation with demagnetized effect	39
3.2.3 Ladder networks model of synchronous machine	41
3.2.4 Three-machine system model	44
3.3 Automatic voltage controller	45
3.3.1 The standard DC excitation system	47
3.3.2 The standard AC excitation system	48
3.3.3 The ST type excitation system	49
3.4 Fuzzy neural controller	50
3.5 Network	50
3.6 The complete simplified linear model of synchronous generator	54
3.6.1 Calculation of the parameters of simplified linear model of a generator	54
3.6.2 Calculation of the parameters for the main exciter	54
3.6.3 The block diagram of complete simplified generator system	55
Chapter 4: Controller of synchronous generator	56
4.1 Introduction	56
4.2 Root Locus design method	57
4.3 Fuzzy system	64
4.3.1 Fuzzy logic	64
4.3.2 Fuzzy set	65

4.3.3 Fuzzy IF-THEN rules	68
4.3.4 Fuzzy rule-base inference	69
4.3.4.1 Fuzzy matching	71
4.3.4.2 Inference	72
4.3.4.3 Combination of the conclusions	73
4.3.4.4 Defuzzification	74
4.3.4.4.1 The mean of maximum method	74
4.3.4.4.2 The center of area	74
4.4 Neural network	76
4.4.1 The structure of neural network	76
4.4.2 The steepest descent method	78
4.4.3 The backpropagation algorithm	81
4.5 The description of fuzzy neural network	87
4.5.1 Fuzzy neural network	87
4.5.2 Parameter learning	89
Chapter 5: Simulation of a voltage control system	93
5.1 Simulation of a conventional controller for a 412 MVA generator	93
5.1.1 The tuning of AVR parameters	96
5.1.2 Training of FNN with the AVR for 412 MVA generator	102
5.2 Time response under the impact of a mechanical disturbance	106
5.3 The fault condition simulated on the NETOMAC software	109
5.3.1 Training of FNN parameters on NETOMAC software	110
5.3.2 Simulation on different fault conditions	113
5.3.2.1 Single-phase fault occurring on the transmission line	114
5.3.2.2 Two-phase fault occurring on the transmission line	117
5.3.2.3 Three-phase fault occurring on the transmission line	120
5.3.2.4 Fault condition happening on the generator terminal	123
5.3.2.5 Critical fault clearing time for fault happening on the transmission line	123
Chapter 6: Discussion and conclusion	125
List of symbols	127
Appendix	132
Appendix A: Data of an AC synchronous generator	132
Appendix B: P. u. base of the generator system	134
Appendix C: Data of the main exciter	135

C.1 Test data of the main exciter under open circuit	135
C.2 Test data of the main exciter connected with a load	136
C.3 The base of the main exciter on stator and rotor	136
Appendix D NETOMAC software	137
D.1 Introduction of the NETOMAC software	137
D.2 Integration of FORTRAN program with NETOMAC	137
D.2.1 The NETOMAC format for calling an external program	138
D.2.2 The format of FORTRAN subroutine	139
D.2.3 How to produce an external.dll file	144
References	146
